APREA THERAPEUTICS

WE CAN'T WAIT TO CURE CANCER

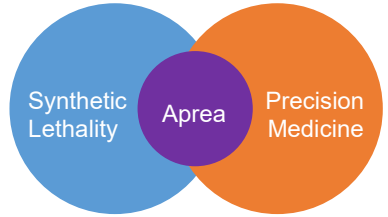
A clinical-stage precision medicine oncology company focused on the discovery and development of targeted therapies for patients with biomarker-defined cancers

May 2026

Forward-Looking Statements

Certain information contained in this presentation includes "forward-looking statements", within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended related to our study analyses, clinical trials, regulatory submissions, and projected cash position. We may, in some cases use terms such as "future," "predicts," "believes," "potential," "continue," "anticipates," "estimates," "expects," "plans," "intends," "targeting," "confidence," "may," "could," "might," "likely," "will," "should" or other words that convey uncertainty of the future events or outcomes to identify these forward-looking statements. Our forward-looking statements are based on current beliefs and expectations of our management team and on information currently available to management that involve risks, potential changes in circumstances, assumptions, and uncertainties. All statements contained in this presentation other than statements of historical fact are forward-looking statements, including statements regarding our ability to develop, commercialize, and achieve market acceptance of our current and planned products and services, our research and development efforts, including timing considerations and other matters regarding our business strategies, use of capital, results of operations and financial position, and plans and objectives for future operations. Any or all of the forward-looking statements may turn out to be wrong or be affected by inaccurate assumptions we might make or by known or unknown risks and uncertainties. These forward-looking statements are subject to risks and uncertainties including, without limitation, risks related to the success, timing, and cost of our ongoing clinical trials and anticipated clinical trials for our current product candidates, including statements regarding the timing of initiation, pace of enrollment and completion of the trials (including our ability to fully fund our disclosed clinical trials, which assumes no material changes to our currently projected expenses), futility analyses, presentations at conferences and data reported in an abstract, and receipt of interim or preliminary results (including, without limitation, any preclinical results or data), which are not necessarily indicative of the final results of our ongoing clinical trials, our understanding of product candidates mechanisms of action and interpretation of preclinical and early clinical results from its clinical development programs and our ability to predict clinical outcomes based on such preclinical and early clinical result and the other risks, uncertainties, and other factors described under "Risk Factors," "Management's Discussion and Analysis of Financial Condition and Results of Operations" and elsewhere in the documents we file with the U.S. Securities and Exchange Commission. For all these reasons, actual results and developments could be materially different from those expressed in or implied by our forward-looking statements. You are cautioned not to place undue reliance on these forward-looking statements, which are made only as of the date of this presentation. We undertake no obligation to update such forward-looking statements for any reason, except as required by law. This presentation shall not constitute an offer to sell or the solicitation of an offer to buy any securities, nor shall there be any sale of any securities in any state or jurisdiction in which such offer, solicitation or sale would be unlawful prior to registration or qualification under the securities laws of any such state or jurisdiction. This presentation may not be reproduced, forwarded to any person or published, in whole or in part.

Aprea Therapeutics (NASDAQ: APRE)
One Critical Pathway - Multiple Targets



Positioned at the forefront of synthetic lethality and precision medicine

Targeted Oncology

Transition from broad, toxic chemotherapy to potentially safer, precision-guided targeted therapies

Precision-Driven Development

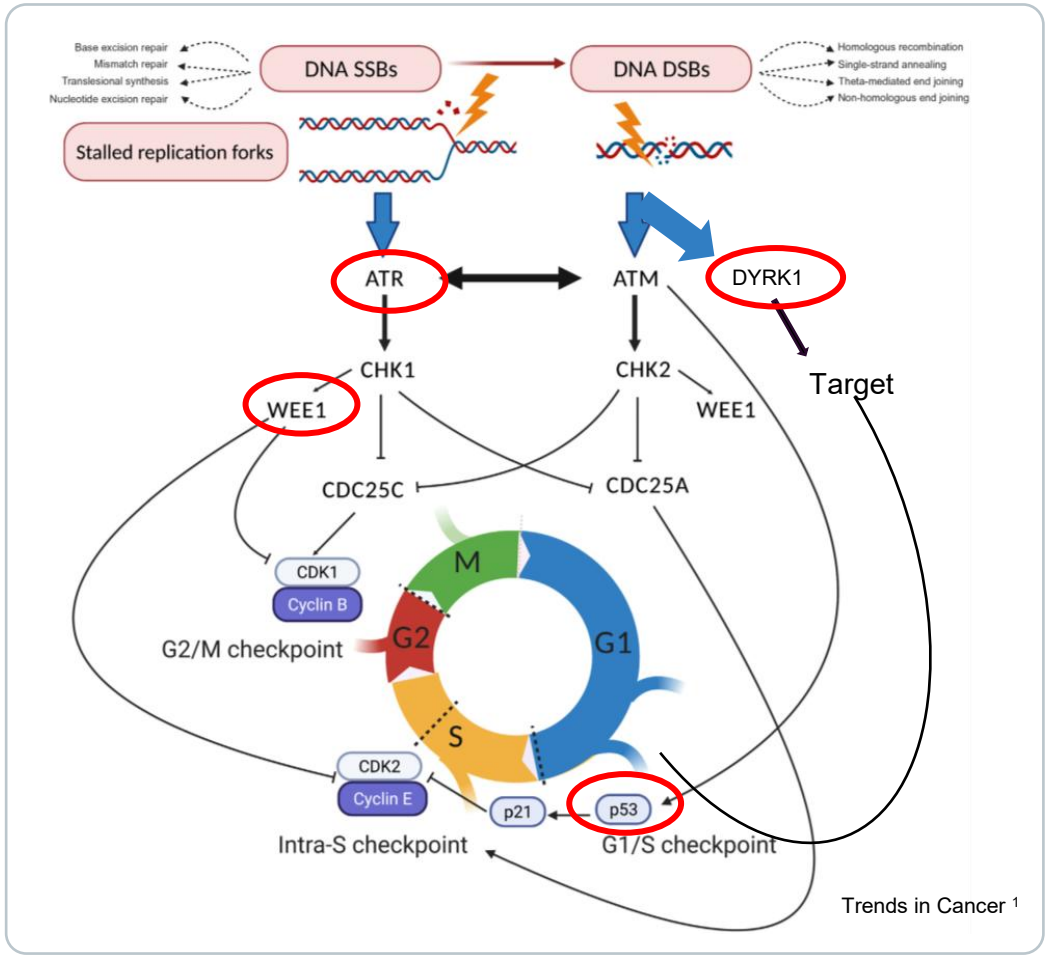
Develop highly selective cancer therapies that exploit tumor-specific mutations to maximize cancer cell killing while sparing healthy tissue

Pipeline with Clinical Momentum

All programs are designed to address significant unmet medical needs across genetically defined cancer populations

Early Clinical Proof-of-Concept

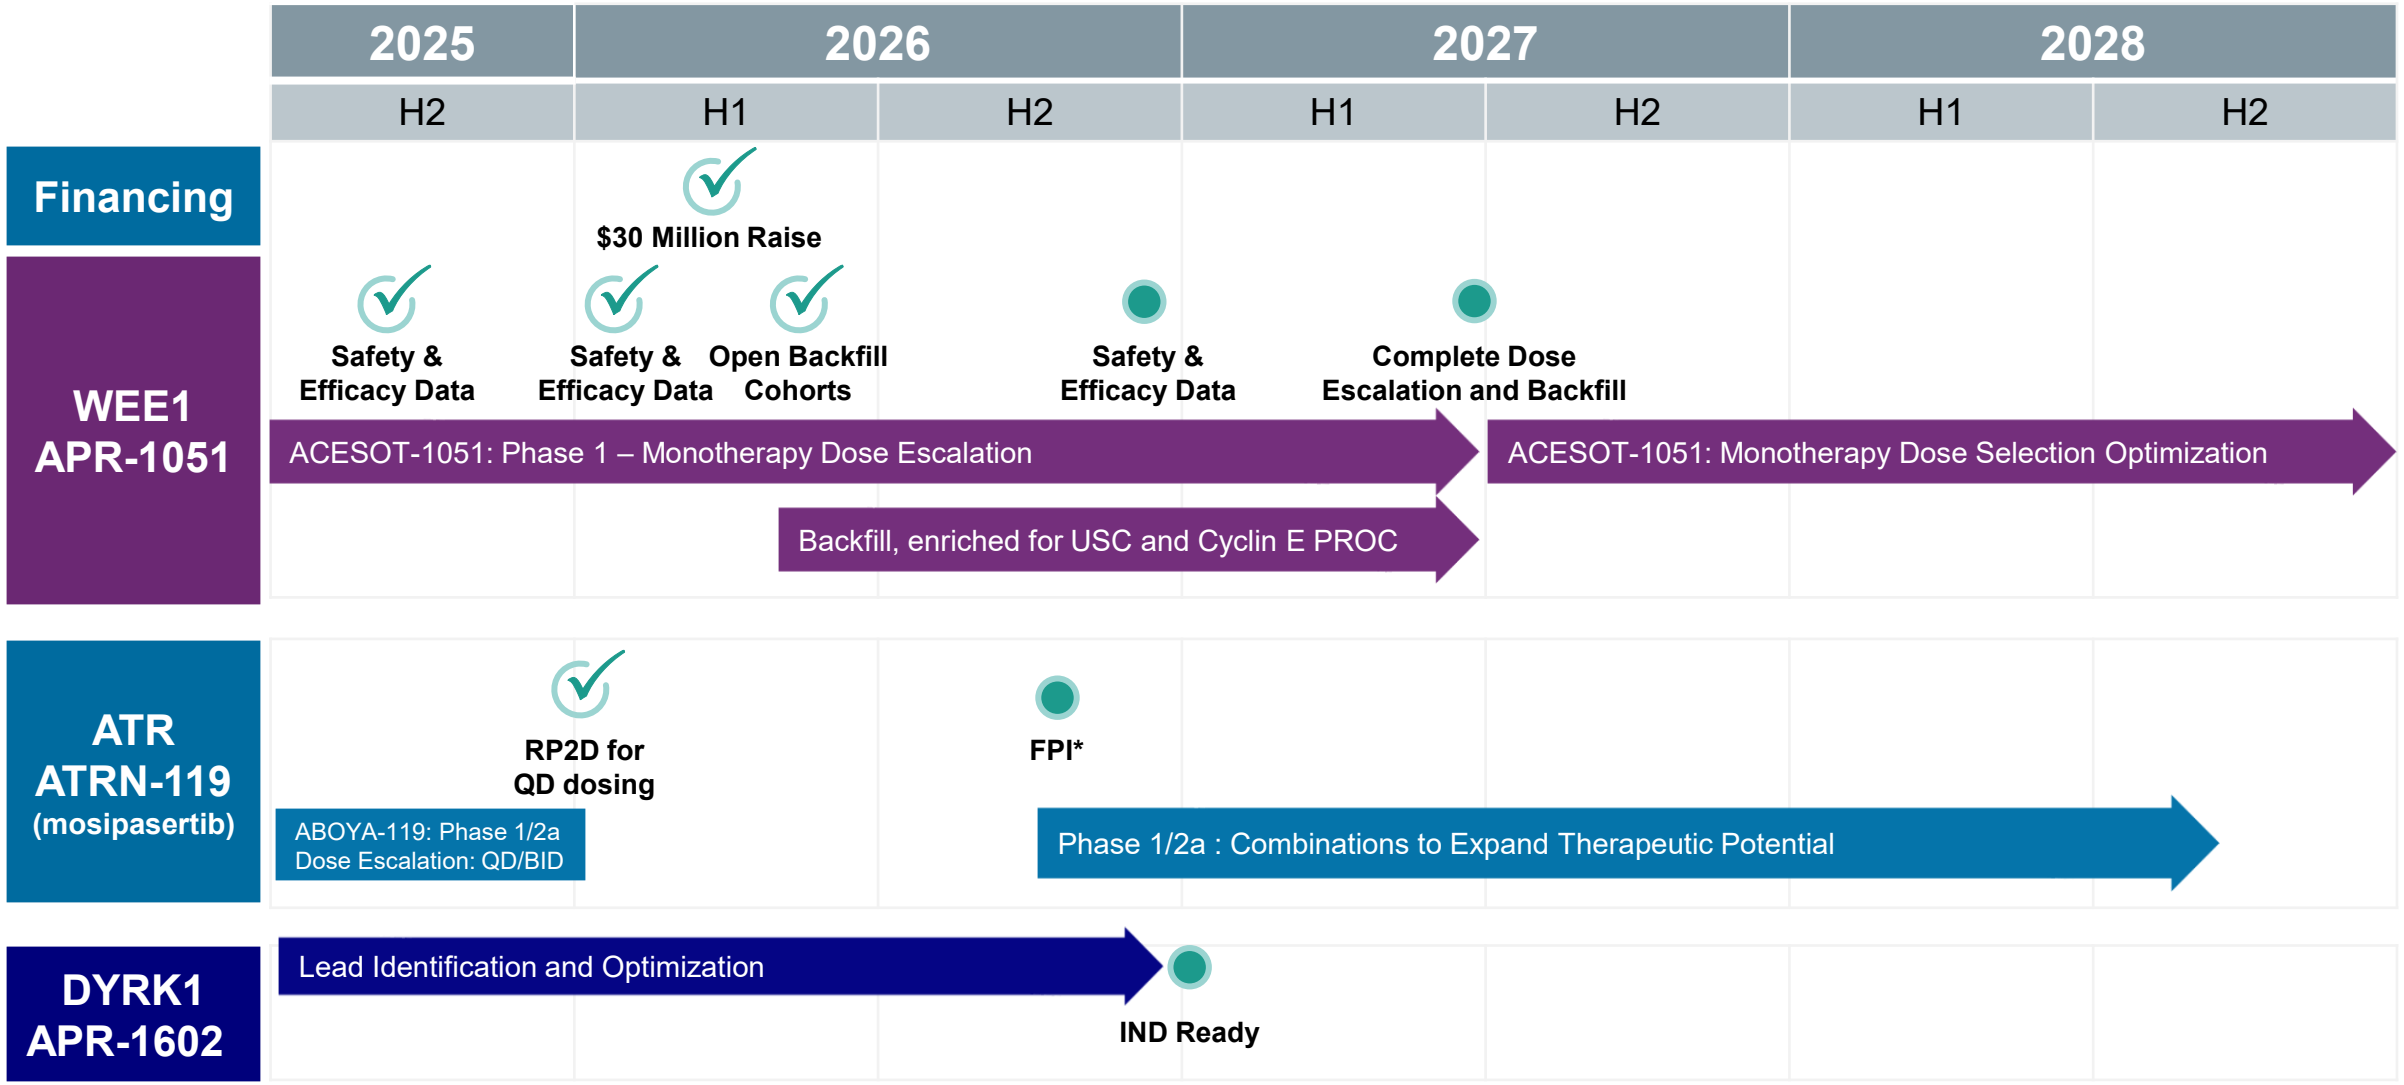
Monotherapy activity demonstrated in ongoing Phase 1 trial



1. Ngoi N, *et al*. Targeting the replication stress response through synthetic lethal strategies in cancer medicine. *Trends in Cancer*. (2021); 7(10):930-957

Robust DDR Development Pipeline and Corporate Milestones

2025-2028 Accomplished and anticipated milestones



DNA Damage Response (DDR)

*FPI contingent upon execution of a research collaboration or partnering agreement; study initiation is expected to be externally supported without use of current company resources.

APREA THERAPEUTICS

WE CAN'T WAIT TO CURE CANCER

WEE1 Inhibitor: APR-1051

ACESOT-1051:

Clinical Proof-Of-Concept

WEE1 Has Emerged as a Therapeutic Target of Significant Industry Interest

Clinically validated, prior WEE1 inhibitors have been challenged by narrow therapeutic windows
Aprea is applying key insights to advance APR-1051 as a potentially best-in-class WEE1 inhibitor

Program	Clinical Limitations	Strategic Outcome	What It Signals
Adavosertib (AstraZeneca)	Hematologic & GI toxicity limited dose intensity	Terminated further clinical development Returned by AstraZeneca to Merck & Co.	Biology works, narrow therapeutic window
Azenosertib (Zentalis)	Continuous dosing not tolerated[1]	TRAEs leading to dose reductions, interruptions and discontinuation	Biology works, therapeutic window still being defined
Debio 0123 (Debiopharm)	QT prolongation liability at high doses[2]	Limited single-agent activity – no responses up to MTD[3]; activity seen in combination with PKMYT1 inhibitor[4]	Potential future as combination agent
Program	**Engineered Profile**	**Strategic Outcome**	**What It Signals**
APR-1051 (Aprea Therapeutics)	Structurally differentiated, highly potent, limited off-target inhibition	Early signals of monotherapy activity without class-limiting tox to date	Potential to expand therapeutic window

No head-to-head studies have been conducted. Trial information is based on publicly available data and should be interpreted cautiously

TRAEs – Treatment related adverse events

APREA THERAPEUTICS

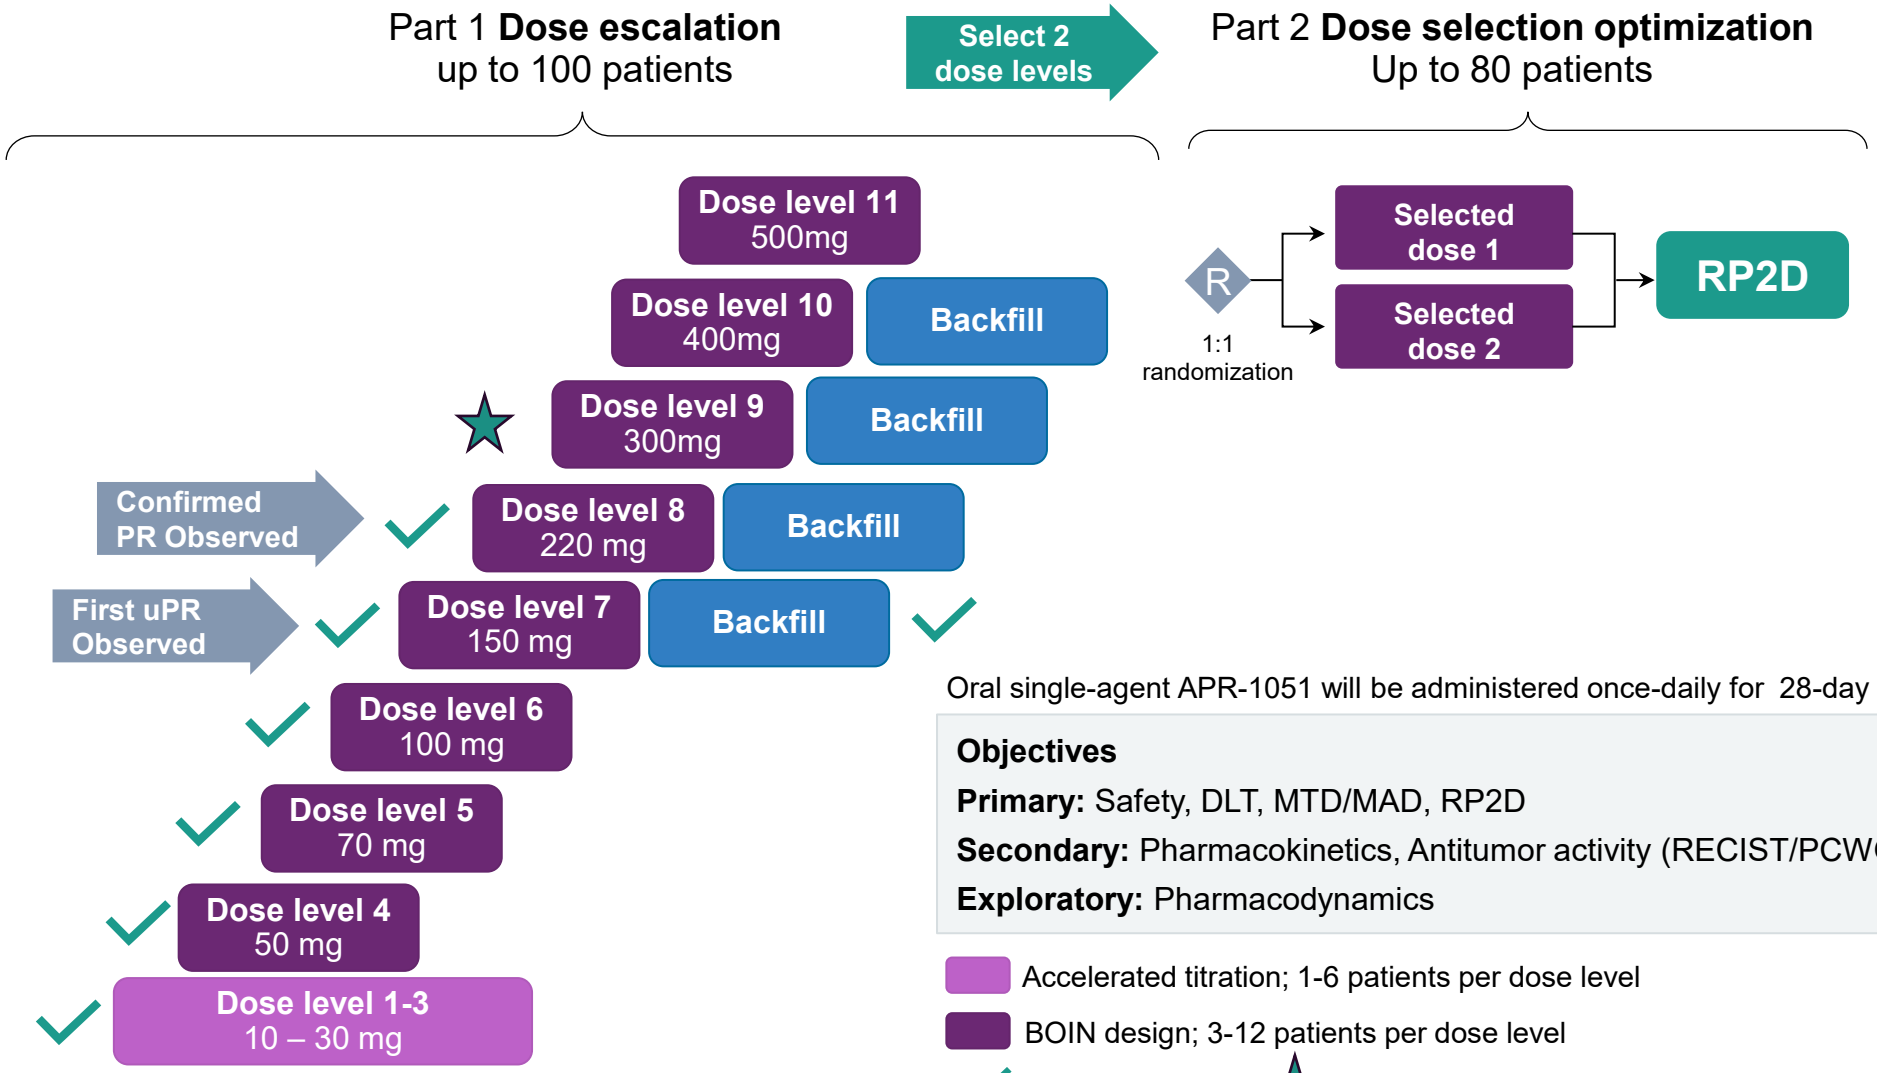
ACESOT-1051: Phase 1 Study Design

Multi-center, open-label Phase 1 single-agent dose escalation and dose selection optimization

Eligible patients

≥ 18 yo with advanced solid tumor harboring cancer-associated gene alterations

- **USC regardless biomarker status**
- **Cyclin E-overexpressing platinum-resistant ovarian cancer (PROC)**
- CCNE1, CCNE2, FBXW7 or PPP2R1A
- HPV+ oropharyngeal squamous cell carcinoma, cervical, vaginal, or vulvar carcinoma
- KRAS-GLY12/GLY13 & TP53 colorectal cancer



Oral single-agent APR-1051 will be administered once-daily for 28-day cycles

Objectives

Primary: Safety, DLT, MTD/MAD, RP2D

Secondary: Pharmacokinetics, Antitumor activity (RECIST/PCWG3)

Exploratory: Pharmacodynamics

Accelerated titration; 1-6 patients per dose level

BOIN design; 3-12 patients per dose level

= cleared = currently enrolling

APREA THERAPEUTICS

APR-1051 Summary of Duration of Treatment (n=28 for all dose levels)

Confirmed Partial Response in Patient 01-011

220mg QD – Currently on treatment

Demographics: 63-year-old Black Female
Site: MD Anderson Cancer Center
Diagnosis: Uterine carcinosarcoma
Key Mutations: PPP2R1A

Treatment History (4 prior lines)

- Line 1: Carboplatin + Paclitaxel → 126 days, PD
- Line 2: Doxorubicin → 56 days, PD
- Line 3: Topotecan → 70 days, PD
- Line 4: Pembrolizumab + Lenvatinib → 5months, PD

APR-1051 – Treatment Outcome

- C1D1: Dec 18, 2025
- Current Status: **On treatment 140 days (C6D1) – May 6, 2026**
- Best Response: **Confirmed Partial Response (PR)**
  - PR (-50%) at first assessment Feb 10, 2026
  - Confirmed PR with additional -9.5% reduction from C3D1 Mar 10, 2026; scan April 8, 2026 showed 0% change
- Tumor marker: CA-125 reduction from BL 362.4 U/mL to C3D1 46.8 U/mL (87% decrease); 40.2 U/mL Mar 11, 2026; 53 U/ml April 08, 2026
- Adverse Events: C1D22 Gr 1 rash. C1D15 Gr1 thrombocytopenia , possibly related to IP; intermittent nausea Gr1 probably related; amylase increase Gr1 unlikely related. No DLT

Disease Control Observed in Early Patient Outcomes

APR-1051 shows single agent activity in rectal cancer with mutated FBXW7

100 mg Cohort Case Report

Stable disease maintained for 178 days in patient with FBXW7 mutation (100 mg QD) (elected to stop study participation)

Patient: 86-year-old Asian Female
Diagnosis: Rectal Cancer
Key Mutations: FBXW7 (Drives Cyclin E accumulation and overexpression)

Treatment History: 5 prior lines - heavily pretreated

- **Line 1:** Capecitabine/oxaliplatin → 191 days, PD
- **Line 2:** Capecitabine/oxaliplatin/bevacizumab → 45 days, PD
- **Line 3:** FOLFIRI + bevacizumab → 43 days, PD
- **Line 4:** Local XRT (lung mets) → 12 days, not evaluable
- **Line 5:** Tretinoin/bevacizumab/Tecentriq (ATRT trial) → 50 days, PD

APR-1051 Activity:

- **Current Status:** Consent withdrawn after 178 days
- **Best Response:** SD at third scan (-15% tumor response)

Notes: Durable SD maintained 181 days in a heavily pretreated 86-year-old patient; well tolerated with minimal toxicity. FBXW7 mutation may be relevant to response

Disease Control Observed in Early Patient Outcomes

APR-1051 shows single agent activity in HPV+ head and neck cancer

70 mg Cohort Case Report

Stable disease maintained for 223 days in patient 01-005 HPV+ head and neck cancer (70 mg QD) (PD)

Patient: 62-year-old White Male
Diagnosis: HPV+ Oropharyngeal Squamous Cell Carcinoma (base of tongue)

Key Mutations: P16+

Treatment History: 3 prior lines

- **Line 1:** Concomitant cisplatin/XRT → 49 days, PD
- **Line 2:** Pembrolizumab→ 84 days, PD
- **Line 3:** Paclitaxel/carboplatin → 184 days, PD

APR-1051 Activity

- **Current Status:** PD after 223 days of SD treatment
- **Best Response:** SD at first scan (-5% tumor response)

Notes: Stable disease maintained for 223 days.

Biomarker Defined Registration Path

Early signals of monotherapy activity across cohorts in genomically defined tumors including uterine cancer, endometrial cancer, CRC and HNSCC

Clinical Activity by Indication and Biomarker

Indication	Biomarker / Altered Genes	Clinical Activity in ACESOT-1051 to Date
Uterine/ Endometrial Cancer	PPP2R1A	2 PR 2 SD
	CCNE1 overexpressed TP53	
CRC	KRAS & TP53	3 SD
	FBXW7	
HNSCC	HPV+	1 SD

Path to Registrational Cohort

1. Expand USC and CycE-PROC
2. Add additional cohorts
   - CRC FBXW7-mutated
   - HPV+ cancers
   - PPP2R1A mutated
3. Confirm durability, consistency of response and safety

- Responses across dose levels support a biomarker enriched expansion path
- Activity beyond endometrial cancer supports additional biomarker-defined cohorts

Data are preliminary from an ongoing dose-escalation study. Responses and stable disease require confirmation in additional patients, and may change as follow-up matures. Safety and efficacy outcomes may vary by dose, schedule, and patient characteristics.

APREA THERAPEUTICS

APREA THERAPEUTICS

WE CAN'T WAIT TO CURE CANCER

APR-1051:

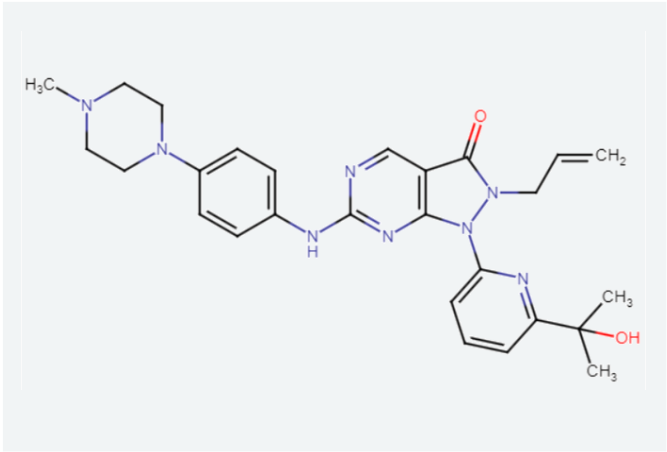
Potentially Differentiated WEE1 Inhibitor

Pre-Clinical

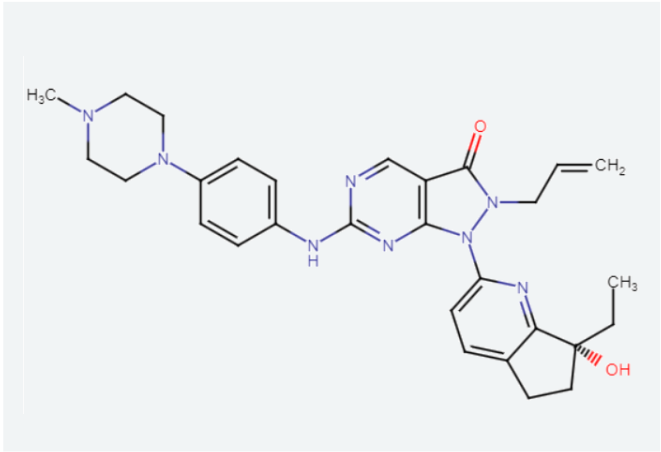
APR-1051: Potentially Best-in-Class WEE1 Inhibitor

Structurally differentiated: high potency, limited off-target inhibition design compared to other molecules

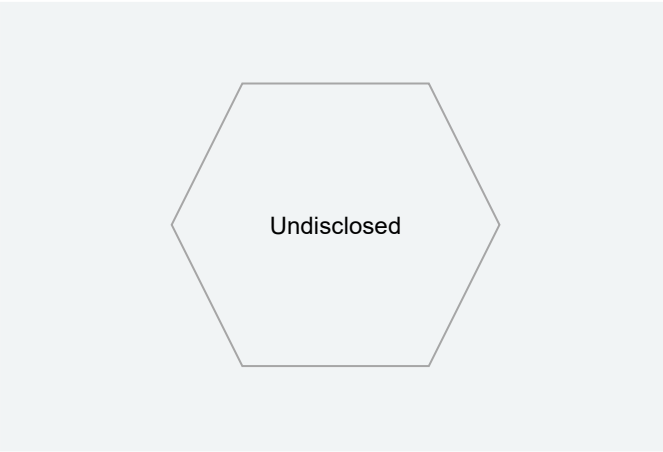
APR-1051 is based on a different molecular structure than AZD-1775 and ZN-c3 (not an analogue)



AstraZeneca
Adavosertib (AZD-1775)



Zentalis
Azenosertib (ZN-c3)



Aprea
APR-1051

No head-to-head clinical studies have been conducted.

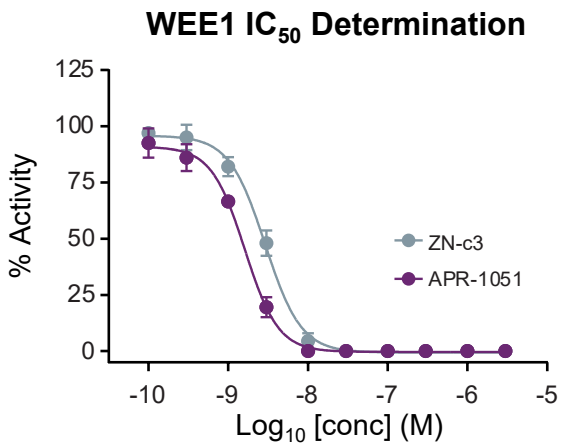
APR-1051: Potentially Best-in-Class WEE1 Inhibitor

Potent inhibitor of WEE1

Does not substantially inhibit structurally and functionally related PLK1, PLK2 or PLK3

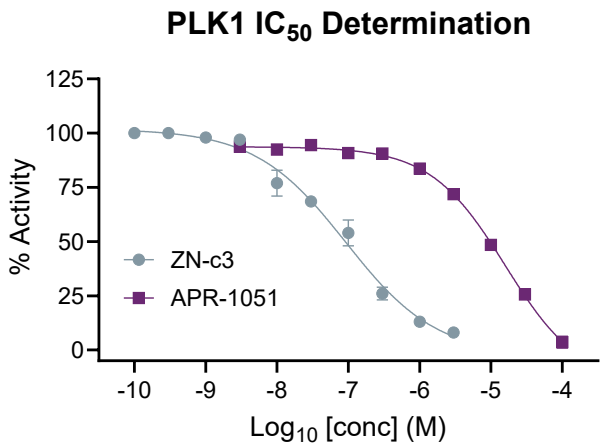
On-target WEE1 potency[1]

Important difference in off-target inhibition between APR-1051 and ZN-c3[1]



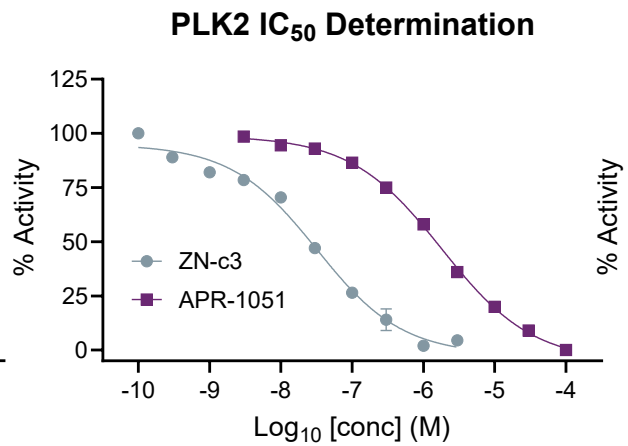
ZN-c3 = 2.9 nM
APR-1051 = 1.6 nM

WEE1 Inhibition
IC50 similar to ZN-c3



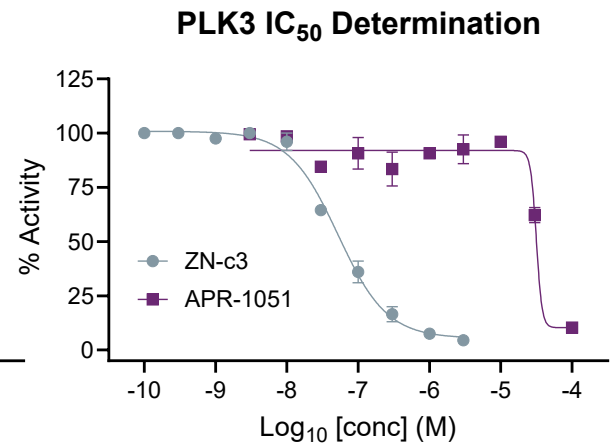
ZN-c3 = 92.1 nM
APR-1051 = 15,900 nM

PLK1 Inhibition
IC50 >150-fold difference



ZN-c3 = 32.0 nM
APR-1051 = 1,800 nM

PLK2 Inhibition
IC50 >50-fold difference



ZN-c3 = 52.2 nM
APR-1051 = 31,600 nM

PLK3 Inhibition
IC50 >600-fold difference

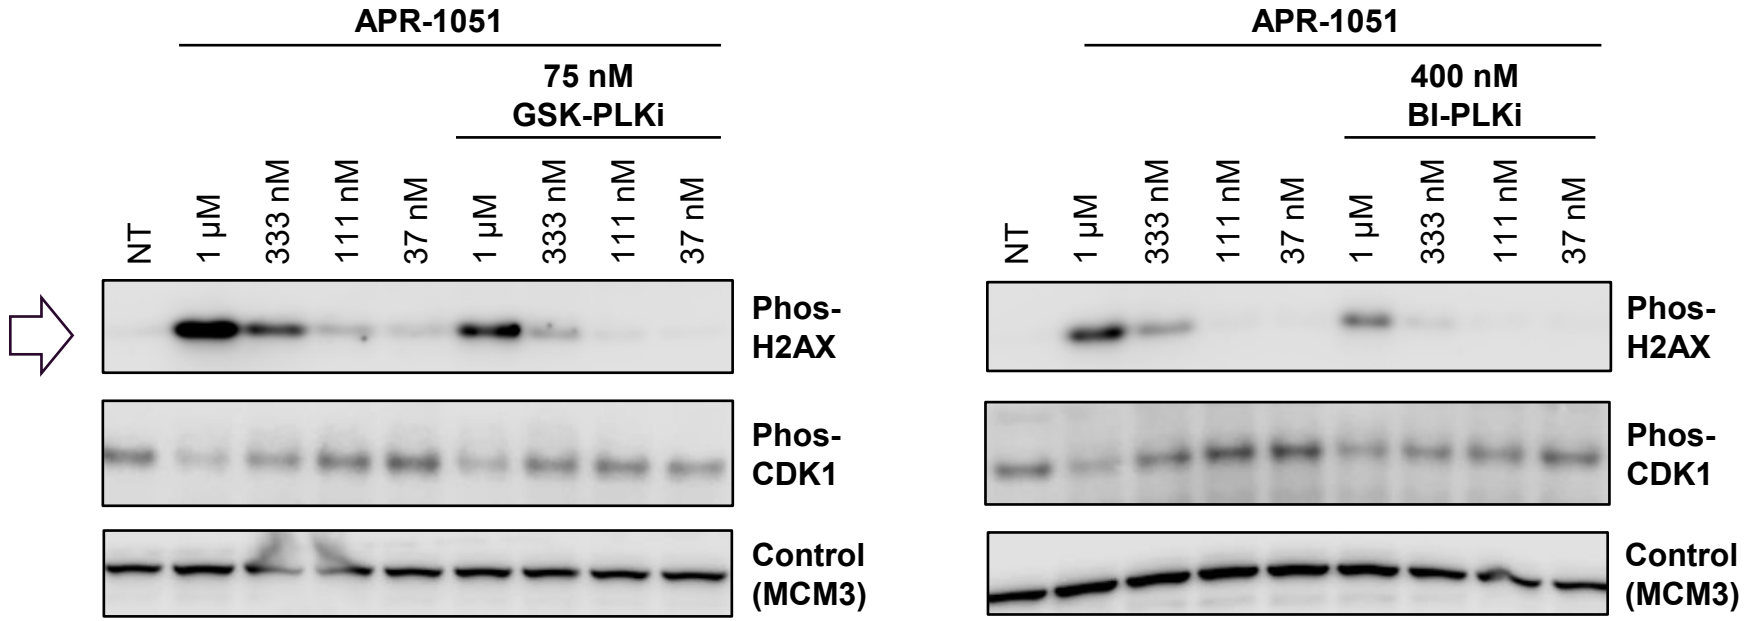
APR-1051 specificity for WEE1 opens potential for greater therapeutic window

[1]Data from exploratory in-vitro studies. No head-to-head clinical studies have been conducted.

PLK1 Inhibition Counteracts Effect of WEE1 Inhibitors[1]

Minimal PLK1 co-inhibition enhances therapeutic window for APR-1051

Evidence of DNA damage allowed by WEE1 inhibition. PLK1 reduces functional potency of WEE1 inhibition



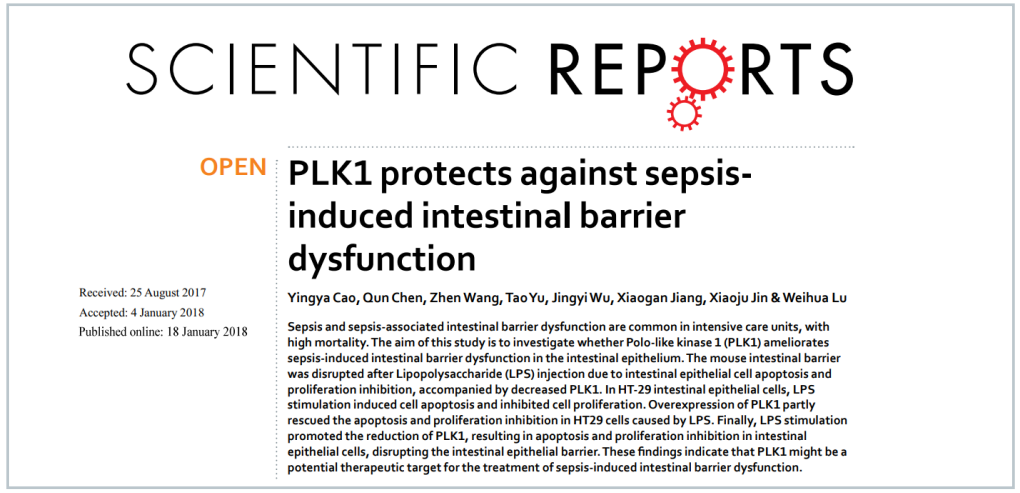
PLK inhibitor, GSK-461364, interferes with the effects of APR-1051 in OVCAR-3 cells

PLK inhibitor, BI-2536, interferes with the effects of APR-1051 in OVCAR-3 cells

Inhibition of PLK1 reduces efficacy of WEE1 inhibition. Results in requiring higher doses of WEE1 inhibitors and introduces PLK1 related toxicity

[1]Data from exploratory in-vitro studies

Studies Show PLK1 Suppression is Associated with Sepsis-Induced Loss of Intestinal Barrier Function



SCIENTIFIC REPORTS

OPEN

PLK1 protects against sepsis-induced intestinal barrier dysfunction

Received: 25 August 2017
Accepted: 4 January 2018
Published online: 18 January 2018

Yingya Cao, Qun Chen, Zhen Wang, Tao Yu, Jingyi Wu, Xiaogan Jiang, Xiaoju Jin & Weihua Lu

Sepsis and sepsis-associated intestinal barrier dysfunction are common in intensive care units, with high mortality. The aim of this study is to investigate whether Polo-like kinase 1 (PLK1) ameliorates sepsis-induced intestinal barrier dysfunction in the intestinal epithelium. The mouse intestinal barrier was disrupted after Lipopolysaccharide (LPS) injection due to intestinal epithelial cell apoptosis and proliferation inhibition, accompanied by decreased PLK1. In HT-29 intestinal epithelial cells, LPS stimulation induced cell apoptosis and inhibited cell proliferation. Overexpression of PLK1 partly rescued the apoptosis and proliferation inhibition in HT29 cells caused by LPS. Finally, LPS stimulation promoted the reduction of PLK1, resulting in apoptosis and proliferation inhibition in intestinal epithelial cells, disrupting the intestinal epithelial barrier. These findings indicate that PLK1 might be a potential therapeutic target for the treatment of sepsis-induced intestinal barrier dysfunction.

APR-1051 WEE1 Summary

First-in-class to translate validated biology into a scalable commercial asset

1 **Clinically validated target**

- WEE1 inhibitors have shown promising activity in genomically defined tumors
- Competitor programs constrained by low therapeutic window

2 **APR-1051 clinical highlights**

- Early clinical proof-of-concept at 150 mg and 220 mg dose levels
- Two partial responses and six patients with stable disease to date
- Potentially favorable safety profile at active dose levels
- Clinical team strengthened to drive next development phase
- Enrollment continues, additional clinical data expected this quarter

3 **APR-1051 preclinical differentiation and potentially best-in-class opportunity**

- Novel structure with high potency, limited off-target inhibition design
- Minimal PLK1 inhibition enhances therapeutic window
- Potential for synergy demonstrated in combination with standard oncology agents

Financial Summary & Capitalization

Investment Highlights

Robust Global Intellectual Property Protection

Family 1: Ataxia Telangiectasia and Rad3-Related (ATR) Protein Kinase Inhibitors

- Macrocyclic inhibitors of ATR & methods of using them to treat various cancers, filed on Oct. 13th, 2015
- Patents granted in AU, BR, CA, CN, EP, IL, IN, JP, KR, MX, HK.
- 1.1: Issued on May 30, 2017 as U.S. Patent 9,663,535
- 1.2: Issued on May 29, 2018 as U.S. Patent 9,981,989
- 1.3: Issued on Feb. 5, 2019 as U.S. Patent 10,196,405

Family 2: ATR Inhibitors and Methods of Use

- Carboxylic acid-containing macrocyclic ATR inhibitors, and prodrugs; methods of using these inhibitors to treat various cancers; filed on Apr. 12th, 2017
- Issued on May 28th, 2019 as U.S. Patent 10,301,324

Family 3: ATR Inhibitor Pharmaceutical Composition and Methods

- International application filed on Apr. 14th, 2023
- Pharmaceutical formulation and composition of our lead ATR inhibitor in the clinic
- Patent granted in JP; Applications pending US, AU, BR, CA, CN, EA, EP, HK, IL, IN, KR, MX, NZ, PH, SG, ZA

Family 4: WEE1 Inhibitor Pharmaceutical Compositions and Methods

- International Application filed on Jun. 3rd, 2022
- Composition of our lead WEE1 inhibitor compounds
- Patent granted in AU; Applications pending in US, AU, BR, CA, CN, EP, HK, IL, IN, JP, KR, MX, ZA

Family 5: Methods of Treating Cancer

- International application filed on Sept. 19, 2025
- Clinical methods of treating advanced solid cancer tumors using lead ATR inhibitor

Family 6: Macrocyclic Undisclosed DDR target Inhibitors and Methods of their Preparation and Use

- International application filed on Jan. 22, 2026
- U.S. Provisional Applications filed on Jun. 6, 2025, and Sep. 19, 2025
